Office Action Summary	Application No. 10/529,547	Applicant(s) HONKURA ET AL.	
	Examiner John P. Sheehan	Art Unit 1742	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement filed March 29, 2005 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, document JP 3250551 (listed on page 3 of 3) that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Interpretation

3. In the claimed structure stabilization process step (claim 1, lines 10 to 15) the hydrogen partial pressure can be 10 kPa and the temperature is in the range of 1033 to 1213 ⁰K while in the controlled evacuation process step (claim 1, lines 16 to 21) the hydrogen partial pressure also can also be 10kPa and the temperature is also in the range of 1033 to 1213 ⁰K. Thus, the hydrogen partial pressure for each of these steps overlap at 10 kPa. In view of this, and the fact that the temperature of each of these

Art Unit: 1742

steps can be the same, the structure stabilization process step and the controlled evacuation process step can be accomplished under the same conditions. In view of this, as claimed these 2 steps can be interpreted to be a single step.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 to 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Takeshita et al. (Takeshita '901, Japanese Patent Document No. 02-004901, cited in each of the IDS's submitted in this application).

Takeshita '901 teaches a process of treating rare earth-iron-boron alloys in hydrogen, which in view of the interpretation of the claims as set forth above under the heading, Claim Interpretation, is encompassed by the instant claims (see Takeshita '901's Abstract).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John P. Sheehan whose telephone number is (571) 272-1249. The examiner can normally be reached on T-F (6:45-4:30) Second Monday Off.
